

# About Page Content

Medium-length website content for a premium, expert-led carbon advisory, certification, trading and exchange brand.

**About-page goal:** Explain who CarbonNxt is, why it exists, how it connects buyers and project developers, and why clients can trust its expert-led approach.

# Building a More Trusted Carbon Market

CarbonNxt is a specialist carbon advisory, certification, trading and exchange business helping companies, project developers, brokers and investors participate in carbon markets with greater clarity, confidence and support.

By combining expert guidance with digital market infrastructure, we simplify the journey from project certification and buyer discovery to transaction execution, portfolio visibility and compliance-ready records.

## 02 / WHO WE ARE

### Expert Guidance for Both Sides of the Market

Carbon markets bring together climate projects, corporate buyers, brokers, investors, standards, registries and verification processes. For many participants, navigating that ecosystem can be complex.

CarbonNxt is designed to make that process easier. We support organizations that want to source and manage credible carbon credits, while helping project developers prepare projects for certification, reach suitable buyers and move transactions toward settlement.

#### For Buyers

Support with sourcing, project evaluation, transaction execution, retirement where applicable, and audit-ready documentation.

#### For Project Developers & Sellers

Guidance on certification readiness, documentation, buyer matching, pricing, contracting and settlement.

## 03 / OUR MISSION

### Make Carbon-Market Participation Simpler, Clearer and More Accessible

Our mission is to accelerate the transition to a low-carbon economy by creating a trusted environment for carbon-market participation and helping market participants trade environmental assets with transparency, compliance and confidence.

We believe better access to credible projects, clearer documentation and stronger buyer-seller connectivity can help direct more finance toward measurable climate action.

## More Than a Listing. More Than a Transaction.

|                                             |                                                                                                                                                                            |
|---------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Expert-Led Support</b>                   | Clients are supported by a team that helps navigate project readiness, buying, selling and transaction requirements instead of relying only on a self-service marketplace. |
| <b>Buyer &amp; Seller Connectivity</b>      | CarbonNxt brings both sides of the market together through active matching, advisory support and transaction coordination.                                                 |
| <b>Certification &amp; Compliance Focus</b> | Project and transaction workflows are built around recognized standards, documentation, traceability and compliance-ready records.                                         |
| <b>Market Intelligence</b>                  | Pricing guidance, market visibility and portfolio insight help participants make better-informed decisions without unnecessary complexity.                                 |

## From Project Readiness to Carbon-Market Execution

|                                          |                                             |
|------------------------------------------|---------------------------------------------|
| <b>Certification &amp; Documentation</b> | <b>Carbon Credit Buying &amp; Selling</b>   |
| <b>Buyer Matching &amp; Brokerage</b>    | <b>Portfolio &amp; Transaction Tracking</b> |
| <b>Pricing &amp; Market Guidance</b>     | <b>Compliance &amp; Reporting Support</b>   |

## Supporting a Broad Range of Climate Project Types

CarbonNxt's market approach can support multiple carbon-project categories, from nature-based climate action to engineered and technology-driven emissions reduction and removal.

|                                |                                 |                         |                                   |
|--------------------------------|---------------------------------|-------------------------|-----------------------------------|
| <b>Forestry &amp; Land Use</b> | <b>Renewable Energy</b>         | <b>Blue Carbon</b>      | <b>Carbon Removal</b>             |
| <b>Biochar</b>                 | <b>Regenerative Agriculture</b> | <b>Waste Management</b> | <b>Industrial Decarbonisation</b> |

## Built Around Recognized Standards and Clear Records

CarbonNxt's approach is centered on quality, documentation and traceability. Where applicable, our team helps clients work with recognized standards and methodologies while maintaining clear project, transaction and retirement records.

|                                                                                                                    |                                                                                                                    |
|--------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| <b>Standards Alignment</b><br>Guidance around recognized carbon standards and methodologies.                       | <b>Verification &amp; MRV</b><br>Support for monitoring, reporting and verification requirements where applicable. |
| <b>Transaction Traceability</b><br>Clear documentation across buying, selling, ownership and retirement workflows. | <b>Audit-Ready Records</b><br>Structured records that can support ESG reporting and internal or external review.   |

## Connecting Climate Projects with Credible Demand

CarbonNxt aims to create a more connected carbon-market experience - one where project developers receive the support they need to reach the market and buyers can access credible opportunities with greater confidence.

Our role is to simplify the difficult parts: certification pathways, project readiness, market access, due diligence, pricing, transaction management and documentation.

### Ready to Start a Conversation?

Whether you want to buy carbon credits, develop a project or explore the market, our team is ready to help.
